**SBS-SMA-BNC** - Converts the SMA socket on the FUNcube to a BNC socket via 160mm of coax making it easier and safer to attach antennas and other devices - **£15.60**

**SBS-SMA-N** - Converts the SMA socket on the FUNcube to an N-Type socket via 160mm of coax making it easier and safer to attach antennas and other devices - **£15.60**

**ML&S are the appointed distributor for FUNcube. Dealer enquiries welcome.**

The original FUNcube Dongle concept: receiving information from space as part of a global educational collaboration project.

Similar to a USB TV Dongle, the FUNcube Dongle simple fits into your computer's USB port. It's compatible with many radio reception programs like Rocky, M0KGGK, Spectravue and LinRad. The FUNcube Dongle also works with Windows XP, Vista and Windows 7 both x86 and x64. In addition, it is compatible with Linux and MacOS as it uses standard USB drivers already integrated into the operating system.

The Pro version gives unlimited access to the frequency range 64MHz to 1,700MHz.

It's also all-mode: this means that it's not just limited to narrow band FM reception. As well as data, the FUNcube Dongle will also receive many other narrow band signals including AM, FM and SSB. It will even receive TV sound channels

As part of AMSAT-UK's FUNcube satellite project, the FUNcube Dongle is the "ground segment", or a radio receiver designed to allow anyone to try their hand at reception of satellites like FUNcube anywhere on Earth as part of a global educational collaboration project collecting information from space.
